# CSE 111 Project

Michael Issa & Alexander Fudala

Environment/Language

- For our database we will use PostgreSQL
- We will use the React Native framework with Expo to run our application
- React Native is a framework for building native apps using React; an open source front end JavaScript library
- Expo will allow us to run our app on iOS, Android, and the web

- The user will access a wide list of cocktails
- When the user selects the data-base, it will display a list of different types of cocktails
- User can add, edit, and search through the different cocktails
- User can search by cocktail names, bartender, bar/company, and the type of glassware
- An Admin will verify all User edits and additions before submission to the database
